The theory is perceived as an alternative to the theory of free business interaction. The theory of addiction was formulated during the post-war era in the 1950s on the basis of the Marxian analysis of the world economy. The theory tries to challenge the economic policies of the free market. The theory holds the ideology of the free market for the free trade between the nations accelerate the development of the less developed nations. Free exchange implies that the rates will be minimal, or there will be no barriers to exchanges, thus opening the global market for non-competitive industries in developing countries. Europe and the United States maintain prohibitive barriers that limit exports from the development of particularly agricultural products and textiles. The development of poor countries is based on free markets and, at the same time, on their competitive participation in the world market. Ciè constitutes a platform for economic growth as developing countries will increase their exports and elve foreign direct investments in their countries. Consequently, they will acquire a lot in terms of capital formation with respect to foreign assistance they receive from a developed nation (Fineman 78). The formation of capital guarantees sustained growth thus mitigating the poverty of the country. In addition, free trade will be useful for developed countries as they will have a market ready for their products. products. eht ta dna ,siloportem a si seirtnuoc depoleved dna seirtnuoc depoleved tsael era yrehpirep taht deveileb eH ,yrehpirep/dezilanigram dna sretneC eht neewteb tnedive era taht seitrapsid eht seiduts yroeht ycnedneped taht sniatniam osodraC euqirnefH odnaneF sruoh 3 sa etill sa ni enod cipot yna no repap lanigiro %001 ruoy teG ,yllabolg sgniswnod dna sgnispsu secudorp metsys tsilatipac eht ,osla ,wef a yb noitairporppa sti dna ynam eht morf sulprus cimorefo fo noitairporpæ eht si msilatipac fo noitcidartnoc eht taht dna tnempoleved rednu secudorp slevel lanoitanretni dna lanoitan htob ta msilatipac taht sniatniam rehtiruf eH ,etillets larehplirep dna depolevedrednu dezilanigram a dna siloportem ro retneC depoleved a otul dlirow eht fo noitazralop eht etarnimile ot ygetarts on srefro ti ,osla ,metsys eht worhtrevo ot gnitgurts esolt ot noitulos on reffo dna dezilanigram era ohw esolt lifeneb ton seod yroeht eht taht sniatniam eh ,llew sa ,lanoitnetni dna ,lanoitcnuf ,larutcurts ,yleman noitanalpxe fo smrof kntitsid ceerht ni yroeht ycnedneped eht dozylana knarf erdnA knaB dlirow dna dnuF ,yratonom lanoitanretni sa hcus snoitutitsni doow noterB morf naol a teg ot seirtnuoc gnipoleved rof smargorp tmentsujda larutcurts gnitaitini sa llew sa ,seicilop edart eerf guiddibrof yb ro ,snoitcnas gnucudortni sa hcus secrof cimonoce hguorht deveithea si sibT .noititsop tneivresbus a ni seirtnuoc depoleved tsael eht peek ylevitca seirtnuoc depoleved taht sniatniam yroeht ycnedneped eht ,seirtnuoc depoleved morf noitatsnepmoc ssel sniag ,nruter ni tub ,snoitan depoleved ot hilaew detalumucca rieht gnidnes suht ;seicnedneped lainoloc sa gnimrofpref snoitan depoleved tsael eht ot deknil si ti .htworg sAAAenoitan depoleved tsael eht fo esnepxe ta si snoitan depoleved fo ssecuc eht taht sniatniam yroeht ycnedneped eht ,ylesrevnoC ,ebolg eht dnuora noitazilarebil dna noitazilabolg fo tcepsa eht stropplus edart eerf taht sniatniam osla There is a surplus of payment balance, favorable commercial conditions and production of industrial raw materials with high demand elasticity. On the outskirts there are some characteristics such as payments scale deficits, unfavorable commercial terms, the domain of multinational companies and the prices of distorted factors. Enzo Faletto defined dependence as a situation in which an economy of a certain country is conditioned by the development and expansion of another economy to which the former is subjugated. While the economies of the dominant countries can expand and be self-sufficient, the economies of the dependent countries will expand only from the reflection of the expansion radiated by the Center. Therefore, the dependence process guarantees self-supporting, the accumulation of privileges for special groups and the continuous existence of a marginalized class. In addition, there is also a dominant dependence on international power relations if these relationships are concerning social, economic, political and technological (Ghosh 67). Preview preview is time for the theory of addiction to return? His central idea is that the developed countries ("core") benefit from the global system at the expense of development (periphery - peripheral countries - which deal with structural barriers that make it difficult, if not impossible, for them to develop in the same way in which i Netherlands already developed. As the neoclassical economy came to dominate the field in the 80s, the theory lost importance and traction. Given the vast imbalances that persist inside and among the nations of the global economy today, it is a appropriate time to revisit the picture. One of the key principles of dependence theory is its focus on the role of history and, in particular, on the role of colonialism in building positions of different countries within the global economy. The analysis of why a country occupies a certain position within the world economy should therefore start globally. Theoreticians of dependence argue that, beyond the end of formal colonialism, valuable transfers of profits continued to flow from the global south to the north. This implies that the "core countries" of the North continue to benefit from their extraction of wealth from the "peripheral countries" of the south. Within this framework, the subdevelopment of the countries in the south can be explained through their continuous exploitation by the North, rather than only because of internal policy failures. With the interviews contained in this book, we aim to explore the degree in which different strands of addition theory can explain the subdevelopment. In particular, we want to develop an understanding of the theoretical elements [which are] useful today, in addition to examining their limits ... [in all.] the collection offers ways of thinking about the relevance of the theory of addition today. While interviews show that there are many versions of addition theory, they also illustrate the relevance of many of the central principles of dependencies theory when analyzing the inequalities of the world today. Of particular importance for understanding the divergence in the development of countries in the world economy is the emphasis on the theory of dependence, global structures, core-peripheral relationships and the importance of historical analysis. historical volume also includes discussions of the tensions and contradictions within the dependency theory framework, as the interviewed scholars diverge on a number of key questions, such as: The nature and history of capitalism The definition of development, and the extent to which development is possible under capitalism Whether the key mechanisms that underpin relations of dependency are primarily economic or if political, social and other mechanisms are equally important The relationship between the local and the global, and whether solutions lie at the national or global level Whether it is necessary to break with relations of dependency, and if so, whether this is possible and how it can be done. How countries such as South Korea were able to move from eAAAperipheryAAA to eAAAcoreAAA Critiques of dependency theory are also discussed, including areas where dependency theory needs to be expanded or refined, e.g., in class analysis and individual characteristics of underdeveloped countries.ÀÀÀ Furthermore, some unorthodox applications of dependency theory are assessed, such as analysis of emerging South-South relations and the dominance of BRICS and intra-European relations after the Cold War.
